The I F Basin is a unique sand-cast white bronze, silicon bronze, brass, or aluminum vessel basin, with a rough, as-cast texture on the outside, and satin-polish on the inside. The Basin was originally designed by Bruce Tomb as a sculptural piece titled *Sacred Basin* in 1984, which has been exhibited and published internationally. The Basin has since been developed as a simple, elegant solution for the extraordinary bathroom.

In keeping with the sculptural quality of the original design, every basin is subtly unique unto itself. Each Basin is individually cast from one pattern, and then carefully detailed by hand,

with the X and O drain details milled to order. Since the manufacturing process is similar to how a bell is made, the I F Basins carry a resonance when tapped, conveying the tone of the cast material. This aural quality distinguishes the I F Basin as substantial and timeless.

The I F Basin is well suited to those who demand the highest quality of materials and simplicity of form. The platonic form of the I F Basin, with its structural tailpiece, enables architects and designers to maximize their creativity for unique installations. We recommend mounting the Basin with an I F Wall Bracket, or directly onto a countertop.
